Shelving

MJ Library Shelving by Aurora System 30

System 30 is the industry's most advanced and cost effective single-slot library shelving system on the market today.

It offers a narrower footprint the capability to grow in height and it also has an open design which will keep your library feeling more airy than it would with case type shelving.

This shelving is also structurally sounder than welded frame as it does not require a base shelf for stability, nor does it need an end panel for anything but esthetics.

Integral back shelves with sliding wire book supports

System 30 Rolling Shelving

System 30 can also be placed on either casters to provide your library with the utmost flexibility. Unlike other shelving manufacturers whose tallest mobile shelving is 48"H, System 30 can be as tall as 66"H.

There is the option of standard casters, or hidden casters. For more information we invite you to take a look at our rolling shelving brochure.

Shelving

Welded Frame

System 1000 is your basic welded frame design. While it doesn't have all the capabilities of System 30 it can be free standing with no overhead bracing or floor fastening as long as the base shelf is deeper than the adjustable shelves. It also has several accessories for different types of collections such as hinged and fixed periodical shelves, divider shelves, sloped multimedia shelves, pull out reference shelves along with the standard flat shelf.

Wood shelving is great in a traditional setting and you truly can't get a warmer look. Unfortunately, it doesn't offer many shelf types but accessories like MagBoxes can help to maximize your storage.

Shelving

End Panels

We have been a part of hundreds of library projects and while many of them have the same shelving, each of them are different. Shelving end panels play a big part in the design and feel of a library. They also allow you to differentiate the areas of your library. For example, your Young Adult/Teen area may have “funky” end panels, where as your Children’s area may have cute cut outs, colors or interactive displays on their panels.

With the different manufacturers we can use any type of wood, laminate, metal, acrylic, or a mix of materials. This is a small sampling of panels we’ve done over the years and some examples of how different areas were outfitted with different panels.

Service Desks

Service desks in a library are pieces that have to function better than any other part of the library. It is of utmost importance that the library staff can work diligently in the space and it also needs to fit the design and logistics of the building. Those factors equate to most circulation desks being custom made. Our design team and millwork facilities are capable of producing any custom desk with any combination of materials.

While the main circulation desk is typically a substantial piece, we are finding libraries are using mobile information desks that can be moved around to fit changing needs. Our manufacturers have recognized these needs and are now producing standard units with various design and functionality options.

Service Desks

Tables

Along with shelving, tables are a pretty important part of a library. No space is truly user friendly without them. Whether for computers or those that

come in to do research, homework, study, or even play board games, a flat surface is a must.

Like everything else, the table style has to flow and there are some pretty good options to choose from! Those options include different shapes, sitting, standing and café heights, lap top bars, metal or wood bases, etc. Each option brings with it its own look and functionality.

Here's a few we opted to showcase.

For working, studying, planning or meeting there are a variety of ways to accomplish this. Whether it is done with tables and chairs, or in a more casual setting with stools or banquettes, these touchdown spots offer endless opportunities for social interaction and the pursuit of new ideas.

Collaboration Tables

Seating

Seating comes in a wide range of shapes, sizes and materials. Many styles are available as a chair and stool which allows you to keep a complimentary look, even at café tables or counters.

While we are selling less upholstered seating than in the past, the number of plastic and all wood chairs being sold has increased because of sanitary reasons. There are hundreds of chairs and stools we could showcase in this brochure but since this is an at a glance book, we've limited them. If you're interested in seeing more, please give us a call!

Lounge Seating

Like side chairs, lounge seating styles and options are nearly limitless! Size, shapes, arms, tablet arms, casters, and even electric are physical attributes that can make your soft seating areas comfortable enough spaces to enjoy a good book or work on a device but maybe not so comfortable you catch unwanted nappers.

We also recognize the need for durable, fabrics that won't easily absorb spills from cups, leaks from pens or drool should you actually catch a napper.

Group Study

With today's focus on collaboration, group study areas are almost a must in the higher education library.

An institution may not have the funds to build a number of physical rooms so these products so these products are a great alternative offering students an area to work on a project, hold a study session or tutor.

We have booths in all shapes and sizes that offer just enough privacy to fully enclosed units or non structural wall systems. Add in a whiteboard table top for brainstorming or a panel to mount a TV and give your groups everything they need to ace whatever project they are working on!

The need varies on a project by project bases but we have you covered.

When your students have a paper to prepare for or an exam to study for they are most likely looking for a quiet, private space to work in. While facilities cannot provide private study rooms for each student, they can provide a private pod. Pods are available in different shapes and materials, some offering acoustic panels for increased privacy.

Privacy Pods

PRIVACY

Modular Furniture

Modular furniture allows you to quickly rearrange an area for a number of uses.

We have tables that can stand alone for individual use and then easily moved together for groups to collaborate fluidly or for a presentation in a community room. Our favorite reconfigurable table is even available at standing height or with a white board top. These tables can fold and nest for easy storage when not in use.

Seating on casters, either side chairs or lounge chairs can be added in for maximum flexibility.

Café furniture is not just for the cafeteria anymore. Libraries and learning commons throughout the country are implementing this type of furniture as a comfortable, relaxed, quiet space for social interaction, study or just a place to un-plug. These pieces can be rearranged to meet the needs of your students with flexibility and mobility being a top priority.

Café Furniture

Flexible Use

In today's world of flexibility, the need applies to furniture as well. The items featured on this page can stand alone or quickly be transformed into a group seating arrangement. The students can arrange and utilize the furniture to meet their requirements.

When space planning an area, many libraries look to special shelves to house periodicals, newspapers multi-media and face out display. This locks in you to having those collection specific shelves until you raise the funds to replace them.

Storage Solutions

MagBoxes can be placed on a standard flat shelf and display the current issue while storing the back issues. When you gain more titles, add more boxes, lose a title, take it away and you've opened up useable shelf space.

A shelf with an adjustable back stop, which we've dubbed the chameleon shelf, also helps with not having all different shelf depths. You can standardize with one shelf throughout the library and adjust the back stop to accommodate picture books, reference, paperbacks, media or MagBoxes. If your collection changes, change the backstop, not the entire shelf.

Room Dividers

With more building being built as wide open spaces, sometimes you just need separation. Room dividers can be temporary wall systems, small portable dividers, large portable dividers or smaller fixed partitions. They are also a great way to keep patrons out from behind a mobile information desk that may be in the center of the floor.

Seasonal, new, hot topics, community are all things that may cycle through your display areas.

Some great display pieces help keep titles cycling through your doors!

Display

The Riveli shelf is a piece that folds down to display pieces or folds up to showcase artwork. An image you choose is printed on magnetic tiles that can be updated whenever you'd like!

Power

Being plugged in requires the need to...well...plug in. There's multiple options here too. There are pieces that can go in your table top, free standing units and many lounge chairs can have power units built in to them. There are units with outlets, USB and/or Qi wireless charging to allow your patrons to stay fully charged.

This image show Connectrac which allows you to get electric anywhere in a room without the need for trenching or unsightly power poles. It is made in such a way that you don't even know you're walking over it.

The Powerball unit has fast charging USB ports that can be upgraded as technology changes without hiring an electrician. The Powerball is available as an in table unit or a portable tower that can be moved around with reconfigurable furniture.

Lockers may be ordered with metal or laminate fronts. Multiple color doors make it easy to mix And match. Choose from keyed locks, electronic locks or hasp locks. Interior power outlets may be installed to charge electronics.

Lockers

Signage

Show them the way. With interior and exterior architectural signage, we can identify and direct people from one place to the next. Signs can be provided for campus navigation, to pinpoint locations, designate departments, welcome, caution and so much more.
